ARCHITECTURE | LAND & ENVIRONMENTAL PLANNING | INTERIOR DESIGN

WHO WE ARE

Design Node is a company of multi-skilled South African professionals from different design, planning and environmental backgrounds.

Through this synergy of skills we offer a sustainable, integrated and holistic approach to small and large scale projects which span across the environmental planning, land development, architecture and interior design disciplines. This enables us to provide a one stop solution to clients with different needs.
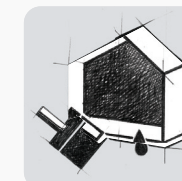

Design Node creates environmental, planning, building and human interface solutions in the industrial, commercial and residential development sectors.

Our mission is to lead in integrated and sustainable design, and built environment solutions through:
• Professionalism and integrity
• Continuous innovation
• Agility to adapt to change
• Continuous improvement of solutions
• High quality service standards

Our team's skills are tempered with our determination to deliver quality services within the financial and time constraints of the client's needs.

We focus on ensuring a holistic approach to projects from conception to final implementation; our constitution involves a cradle to cradle approach, planning with a post (current) use development in mind.
